

Review of Breakfast Presentation 6 Star Green Star Case Study – Workplace 6, Sydney

The GBCSA hosted a very successful breakfast presentation on 20 May 2008 at the Granger Bay Hotel School in Cape Town. Anika Spears, the Environmental Manager of Buildcorp Australia - the developers of Workplace 6 - shared her experience as a project team member of the first 6 Star Green Star building in Sydney. This building will become the headquarters of Google Australia and Accenture amongst others. The presentation gave attendees insight into how the team went beyond standard design to construct a leading Green Star rated building. An in-depth case study presentation was given whereafter the floor was opened for questions and discussion. This presentation, one of many in the pipeline, was recommended for anyone currently interested in the application of Green Star in future projects.

The presenter was only available for the once-off date in Cape Town. However, there was an overwhelming response to the event and the GBCSA will certainly be hosting similar talks at other major centres in South Africa whenever suitable experts are available.
